PREVENTIVE MAINTENANCE PROCEDURES:

Systems/equipment fall within this SOW: The average area of the residences to be maintained is about (200) m². Residences are located within a few kilometers in and around Abdoun area.

All systems and equipment/materials located outside the residences and related to any part of the heating and hot water systems should be maintained:

1.0 Boiler: Semi-Annual works:

1.1 Special Instructions:

1. Review manufacturer's instructions.
2. De-energize, tag and lock circuits.
3. Account for all tools before closing boiler.

1.2 Check Points:

1. Check all automatic air vents and replace damaged or rusted ones.
2. Scrape and clean boiler inside of scale. Dispose debris properly away from residence.
3. Brush chimney connection and clean in and out. Make sure check door is secured closed.
4. Check the burner control box and thermostat. Test the exhaust for correct burning and make the required adjustments in air/fuel ratio and diesel pump pressure. Replace the boiler's nozzle with correct size and type as per manufacturer's recommendation if needed.
5. Check and replace worn or damaged insulation at boiler or pipes.
6. Check the expansion line and tank and the makeup line. Make sure tank has water and feed line running. Check the diesel filling pipe and make sure no leaks in them. Correct any damage or leak.
7. Drain, washout, and flush boiler (not to be carried out on hot boiler system).
8. Test all valves for open/close positions, repair damaged and make sure they are on correct position (open or close). Valves for the relief valves, expansion line, domestic hot water line and air vents should be kept open after completion of works.
9. Determine if there are any major problems with boiler, cylinder or pumps that require any of them be replaced. Repair if repairable.
10. Check for excessive rust build-up between sections (cast iron type).
11. Examine all water lines to controls to determine that they are clear of scale and arranged to insure proper operations.
12. Tighten packing nuts on valves and pumps. Make sure all pumps working correctly. Repair any damage or leak.
13. Flush strainer baskets and oil solenoid valve seats. Replace diesel filter. Check diesel tank and make sure access door is closed. Make sure there are no leaks,

clean the sight glass, repair any leaks, check the burner's flexible connections and repair as needed.

14. Check boiler room for adequate ventilation, remove any blockages.
15. Check all operations of control box, thermostat and valves.
16. Check flue connections for tight joints and minimum resistance to air flow. (See that combustion chamber, flues, breeching, and chimney are clear before firing.)
17. Take CO₂ flue gas temperature readings for determination of efficiency of the unit. CO₂ for atmospheric gas burners should be 8 to 9.5%. For forced draft burners 9 to 10%. Flue gas temperature should be at 300 to 600 F. Combustion efficiency should be approximately 80%. If efficiency is low, check system and correct.
18. Check burner for flashback and tight shutoff of fuel.
19. Check operation of controls. Clean and adjust if necessary.
20. Satisfactory operation and adjustment should conform to manufacturer's instruction.
21. Check all electrical wiring and make sure they are no loose connections or exposed wires.
22. As a whole system, check for system and parts integrity, check and correct: any leaks, damaged insulation, abnormal wiring, abnormal combustion, abnormal noises, and any other deficiencies.

2.0 Burner

1. Test and inspect burner (with and without firing) for leaks and for proper combustion.
2. Time trial for ignition for pilots and burners should be in accordance with manufacturer's instructions.
3. Check operation of automatic controls and combustion flame safeguards for normal operation. There should be no presence of oil discharge, ignition or flame. Check the photocell and clean it, replace it if not working properly.
5. Check delivery of fuel in relation to its response to the ignition system. Examine electrodes for carbon buildup, dislocation, distortion, and burning of parts.
6. Ignition transformer to supply dependable arc, adjust and regulate as required for clearance and air gap.
7. If exists; clean and adjust draft regulator and air shutter on a natural draft burner to ensure access air quantities are minimum for complete combustion. Test with flue gas analyzer.

BIASI...The Style of Warmth

The B-10 boiler system has been heating residential buildings throughout the world for years. It has proven its fuel efficiency and durability in countries where fuel can cost up to four times as much as in the U.S. The same fuel-saving technology is now available here in North America. With the three-pass boiler design and low water content, heat is quickly supplied for your heating zones and hot water needs. Combined with a boiler temperature reset, high limit control, you can achieve a fuel savings of up to 40% over conventional single-pass boilers. You will also have peace of mind since the B-10 boiler package complies with ASME and UL standards. The B-10 boiler system is the cost-competitive heat and hot water system of choice.

Maximum water working pressure: 58 PSI. (1) The burner input is based on oil with a heat value of 140,000 BTU/Gal.; (2) The net output ratings shown are based on piping and pick-up allowance of 1.15; (3) The efficiency ratings are based on a combustion condition of 12.5% CO₂. Warranty: The BIASI B-10 boiler has a limited lifetime warranty. A copy is provided with each boiler or is available from your dealer. Built in accordance with the requirements of ASME boiler and pressure vessel code.

A 3-pass boiler design is the most efficient way to get the maximum amount of heat from the fuel, since it contains three times as much interior surface area (compared to a single-pass boiler) to extract heat from.

Technical Advantages

- Gas or oil burner compatible
 - Easy-access swing door
- No flue required; can be direct vented outdoors
- Low water content boiler heats up faster with less fuel
- Efficient 3-pass heat exchanger boiler design
- GG20 cast-iron construction for superior heat retention and durability
 - ASME and UL listed
- 58 PSI cast-iron construction

EXA cast iron boilers

EXA: The high-efficiency cast iron boiler

Modern technology led to the development of EXA's high efficiency boiler with low NO_x and CO emissions. The boiler body is a high quality cast iron and fully complies with DIN 1551 standards. It is suitable for operation with light oil or gas fired double-burner.

The casing has been painted using a powder-type system.

State-of-the-art technology

The boiler body has been designed with the aid of a CAD system. The manufacturing process is automatic and all boilers undergo stringent testing and quality control. The burner support plate is perforated and dimensions are uniform for all burners. All EXA boilers are "CE" certified.

Silent running

Heat loss sound insulation on EXA boilers is provided by a boiler body lining that consists of 60 mm glass wool insulator and the application of sound-absorbent paneling inside the casing.

Easy maintenance

Access to the boiler is easy and is accomplished by removing a single panel from the front part.

The EXA boiler has been designed in such a way as to make maintenance operations as easy as possible by arranging the various components in easily accessible positions.

The range

The EXA range consists of 8 models with effective thermal power ratings from a maximum of 20.9 kW up to a maximum of 97.3 kW.

High performance

A specially designed combustion chamber and heat exchanger (with 3-loop tube) can provide optimum combustion with all models of over 97%.

EXA boiler with PAC S heater

Plenty of hot water with the PAC S

To ensure that plenty of hot water is made available, we have carefully developed a dual solution that links the EXA boiler to a special coil-type rapid-exchange PAC S storage heater. This heater comes complete with condenser, one-way valve, upper couplings and drain valve.

All components are easily accessible and inspected. A housing for an additional heating element is already in place. The PAC S can be positioned on either the right or left-hand side of the boiler, thus ensuring that overall dimensions retain their compactness. The casing is made of powder-painted sheet metal. To ensure that the boiler/heater unit remains compact and retains its carefully designed lines the control panel is inserted as an integral part of the casing.

(f) reserved

(g) reserved

(h) *Certification Regarding Responsibility Matters (Executive Order 12689)*. (Applies only if the contract value is expected to exceed the simplified acquisition threshold.) The offeror certifies, to the best of its knowledge and belief, that the offeror and/or any of its principals—

(1) ☐ Are, ☐ are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency;

(2) ☐ Have, ☐ have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a Federal, state or local government contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or

destruction of records, making false statements, tax evasion, violating Federal criminal tax laws, or receiving stolen property;

(3) ☐ Are, ☐ are not presently indicted for, or otherwise criminally or civilly charged by a Government entity with, commission of any of these offenses enumerated in paragraph (h)(2) of this clause; and

(4) ☐ Have, ☐ have not, within a three-year period preceding this offer, been notified of any delinquent Federal taxes in an amount that exceeds \$3,500 for which the liability remains unsatisfied.

(i) Taxes are considered delinquent if both of the following criteria apply:

(A) *The tax liability is finally determined.* The liability is finally determined if it has been assessed. A liability is not finally determined if there is a pending administrative or judicial challenge. In the case of a judicial challenge to the liability, the liability is not finally determined until all judicial appeal rights have been exhausted.

(B) *The taxpayer is delinquent in making payment.* A taxpayer is delinquent if the taxpayer has failed to pay the tax liability when full payment was due and required. A taxpayer is not delinquent in cases where enforced collection action is precluded.

(ii) *Examples.*

(A) The taxpayer has received a statutory notice of deficiency, under I.R.C. §6212, which entitles the taxpayer to seek Tax Court review of a proposed tax deficiency. This is not a delinquent tax because it is not a final tax liability. Should the taxpayer seek Tax Court review, this will not be a final tax liability until the taxpayer has exercised all judicial appeal rights.

(B) The IRS has filed a notice of Federal tax lien with respect to an assessed tax liability, and the taxpayer has been issued a notice under I.R.C. §6320 entitling the taxpayer to request a hearing with the IRS Office of Appeals contesting the lien filing, and to further appeal to the Tax Court if the IRS determines to sustain the lien filing. In the course of the hearing, the taxpayer is entitled to contest the underlying tax liability because the taxpayer has had no prior opportunity to contest the liability. This is not a delinquent tax because it is not a final tax liability. Should the taxpayer seek tax court review, this will not be a final tax liability until the taxpayer has exercised all judicial appeal rights.

(C) The taxpayer has entered into an installment agreement pursuant to I.R.C. §6159. The taxpayer is making timely payments and is in full compliance with the agreement terms. The taxpayer is not delinquent because the taxpayer is not currently required to make full payment.

(D) The taxpayer has filed for bankruptcy protection. The taxpayer is not delinquent because enforced collection action is stayed under 11 U.S.C. §362 (the Bankruptcy Code).

(i) Certification Regarding Knowledge of Child Labor for *Listed End Products* (*Executive Order 13126*). (iv) The compensation (wage and fringe benefits) plan for all service employees performing work under the contract is the same as that used for these employees and equivalent employees servicing commercial customers.

(3) If paragraph (k)(1) or (k)(2) of this clause applies—
